

H1N1 Influenza Vaccine

The CDC expects that the next wave of H1N1 flu may arrive in March and continue through May or so. If your child has not yet been vaccinated against H1N1, it is not too late! I still have 70 doses of Flu-mist vaccine left. Children under age nine need two doses spaced four weeks apart. I have enough doses left to fully vaccinate thirty-five more children. If your child has already had one dose, I can give the second. Please use the forms on the ECS web page or call me for hard copies in your child's folder, in order to have your child vaccinated here at school. Thank you.

I hope to hear from you!
